

Diabetes is Common.

In 2017, approximately 1 in 10 (10.5%) Kansas adults reported ever being diagnosed with diabetes.¹ That's more than 230,000 Kansans.¹

Based on the American Diabetes Association diabetes risk test, an additional **2 out of 5** Kansans age 18 years and older without diabetes are at increased risk[†] of developing the disease.^{1,2}

Prevalence of Diabetes by Public Health Preparedness Regions¹

County	Prevalence (%)
Wyandotte (WY)	14.1
Dickinson (DK)	12.9
Geary (GE)	12.7
Leavenworth (LV)	11.8
Sedgwick (SG)	11.5
Shawnee (SN)	11.5
Barton (BT)	11.5
Montgomery (MG)	11.5
Crawford (CR)	11.4
Pottawatomie (PT)	11.3
Harvey (HV)	10.4
Butler (BU)	9.9
Reno (RN)	9.8
McPherson (MP)	9.8
Atchison (AT)	9.6
Sumner (SU)	9.6
Saline (SA)	9.5
Ellis (EL)	9.3
Miami (MI)	8.9
Franklin (FR)	8.8
Johnson (JO)	7.8
Finney (FI)	7.8
Douglas (DG)	7.6
Lyon (LY)	7.1
Riley (RL)	5.5

Prevalence of Diabetes in 25 Counties*

* Counties in grey=Insufficient sample and/or statistically unreliable estimates and/or prevalence estimates with margin of error>5.

† Risk calculation based on age, sex, history of delivering a baby weighing more than 9 pounds (among women) or gestational diabetes, family history of diabetes, high blood pressure status, physical activity status, and body mass index.
